Game Design Pillars

Airron Kennedy

Part 2 - Ages 12 to 18

Cover 4 Pillars of Development

Each Pillar:

1. Explain the pillar. - 1 Paragraph (Content/Length 5 points - Content/Focus 5 points)

2. How does this pillar impact game design or UX. 1 paragraph (Content/Length 5 points - Content/Focus 5 points)

3. How can we use this pillar in publishing/marketing/BI. 1 paragraph (Content/Length 5 points - Content/Focus 5 points)

- Each student will do this for 4 pillars covered in lecture. (4 pillars x 3 paragraphs is a minimum of 12 paragraphs).

- Maximum points is 30 x 4 = 120 points

Pillar 1: Tourism as experience

Tourism as an experience for ages 12 to 18 refers to travel experiences that are designed to cater to the interests, preferences, and developmental needs of adolescents. Adolescents are seeking unique and exciting experiences that offer opportunities for exploration, adventure, and personal growth. They are also interested in experiences that allow them to connect with their peers and establish their independence.

The tourism experience pillar for ages 12-18 can impact game design in several ways. Game designers can create virtual travel experiences that cater to the interests and developmental needs of adolescents, providing a fun and educational way for them to explore new places and cultures. For example, adventure games can feature virtual tours of historical and cultural sites, allowing adolescents to learn about different parts of the world while engaging in an interactive experience. Educational games can also incorporate virtual travel experiences that teach adolescents about different cultures and communities, helping to promote empathy and understanding.

Tourism experience pillar for ages 12-18 can also be used in publishing, marketing, and business intelligence by creating content and campaigns that appeal to the interests and developmental needs of adolescents. Publishers can create travel guides and adventure books that cater to the unique interests of this age group, while marketers can promote travel packages and experiences that offer opportunities for exploration, adventure, and personal growth.

Pillar 2: Eye Tracking

Eye tracking refers to the measurement and analysis of the movements of an individual's eyes, and it can be used to study how adolescents aged 12-18 perceive and interact with visual information. Eye-tracking technology can provide insights into how adolescents view and process visual stimuli such as advertisements, videos, and other forms of media, and can be used to improve the design and effectiveness of visual media.

Eye-tracking can have a significant impact on game design by providing insights into how players perceive and interact with visual elements within a game. Game developers can use eye-tracking technology to identify areas of a game that players are focusing on or ignoring, and use this information to optimize the game's design, including user interface elements, level design, and game mechanics. For example, eye tracking can be used to determine the effectiveness of in-game advertisements or the visibility of important gameplay elements. Developers can also use eye-tracking data to create more engaging gameplay experiences, by designing levels or puzzles that focus on specific visual cues, or by adjusting the difficulty of the game based on how well players are able to identify and react to visual stimuli.

Eye-tracking technology can also be used in publishing, marketing, and business intelligence to optimize the design and effectiveness of visual media for adolescents aged 12-18. By using eye tracking to understand how adolescents view and process visual stimuli, publishers and marketers can create more effective campaigns, advertisements, and educational materials that are tailored to the unique needs and preferences of this age group. Eye tracking can also help identify potential areas of confusion or distraction, allowing publishers and marketers to optimize content for maximum impact.

Pillar 3: Customer Value

Customer value as it pertains to ages 12-18 refers to the perceived benefit that adolescents derive from a product or service relative to its cost. Adolescents in this age group are highly influenced by peer groups, social media, and other cultural factors, and may prioritize the value of products or services based on their perceived social status or popularity. For example, a clothing brand may focus on delivering the latest fashion trends at an affordable price point, while a gaming company may prioritize the quality and uniqueness of its game content to attract and retain adolescent customers.

Customer value plays a significant role in game design as it determines the overall appeal of a game to its target audience of adolescents aged 12-18. Game developers must create games that offer a high degree of customer value by providing engaging, immersive, and rewarding gameplay experiences that align with the unique preferences and priorities of this age group. Ultimately, the success of a game depends on its ability to deliver customer value and stand out from the competition. Game developers must continually innovate and adapt their designs to meet the evolving needs and preferences of adolescent gamers, while also balancing the need for profitability and business success.

In publishing, marketing, and business intelligence, the concept of customer value can be used to guide product development, marketing strategies, and customer engagement efforts. By focusing on delivering products and services that align with the unique preferences and priorities of adolescents aged 12-18, businesses can establish a strong market presence and build lasting relationships with their target audience. This can include tailoring marketing messages to appeal to the social and cultural values of this age group, offering convenient and seamless digital experiences, and using data analytics to track and optimize customer engagement and satisfaction. Delivering customer value requires a deep understanding of the target audience and a commitment to continually innovating and adapting to changing market trends and customer needs.

Pillar 4: Meditative Mindfulness

Meditative mindfulness is a technique that involves intentionally focusing one's attention on the present moment and being fully aware of one's thoughts, feelings, and sensations. For adolescents aged 12-18, meditative mindfulness can help promote emotional regulation, reduce stress and anxiety, and improve overall well-being. Meditative mindfulness can be practiced in a variety of ways, including breathing exercises,

guided meditations, and body scans. It can be incorporated into daily routines and activities, such as before bed, during breaks between classes, or while engaging in physical activity.

Meditative mindfulness can be incorporated into game design to promote relaxation and stress reduction for players, particularly those in the 12-18 age range. Games can be designed to include meditative elements such as calming visual and audio effects, relaxation techniques, and mindfulness exercises. Games can be designed to encourage deep breathing or visualization exercises, and players can be guided through these exercises during gameplay. Additionally, games can be designed with calming music and visuals that promote relaxation and mindfulness.

Meditative mindfulness can also be utilized in publishing, marketing, and BI to promote well-being and engagement. Techniques such as deep breathing and visualization exercises can be incorporated into marketing campaigns and product offerings to promote relaxation and stress reduction for customers. In BI, data visualization and analytics tools can be designed to promote mindfulness and reflection on business goals and strategies. Overall, incorporating meditative mindfulness into publishing, marketing, and BI can help promote customer engagement, improve decision-making, and foster a culture of well-being and mindfulness.
