Game Design Pillars

Airron Kennedy

Cover 4 Pillars/Ideas/Areas of Developmental Game Impact

Each Pillar:

1. Explain the pillar. - 1 Paragraph (Content/Length 5 points - Content/Focus 5 points)

2. How does this pillar impact game design or UX. 1 paragraph (Content/Length 5 points - Content/Focus 5 points)

3. How can we use this pillar in publishing/marketing/BI. 1 paragraph (Content/Length 5 points - Content/Focus 5 points)

- Each student will do this for 4 pillars covered in lecture. (4 pillars x 3 paragraphs is a minimum of 12 paragraphs).

- Maximum points is 30 x 4 = 120 points

Pillar 1: Cognitive Skills

for ages 6 to 12, Cognitive Skills are being learned to enhance their memory, attention, perception, logical reasoning, spatial awareness, and communication. Cognitive Skills are the core to making decisions and figuring things out. At a young age, this is happening very fast and kids are able to take on a lot of information. developing strong cognitive skills in children aged 6-12 is essential for their academic, social, and emotional development. By providing opportunities for children to practice and develop these skills, parents, and educators can help children reach their full potential and succeed in all areas of their lives.

Understanding cognitive skills and how they develop in children can be helpful in game design, as games can be an excellent tool for promoting cognitive development in children. Game designers can incorporate elements that help children develop and practice cognitive skills in a fun and engaging way. It is important to keep in mind that games should be age-appropriate and developmentally appropriate for the target audience, taking into consideration the cognitive skills and abilities of children at different ages.

Recognizing cognitive development is useful in a range of areas, including publishing, marketing, and business intelligence. By creating age-appropriate publications with appropriate language, visual aids, and interactive elements, publishers can promote cognitive development. Marketers can appeal to specific cognitive skills, such as attention or memory, to resonate with their target audience. Businesses can conduct research to understand their target audience's cognitive needs and abilities and use this knowledge to develop effective, engaging, and age-appropriate products and services that promote cognitive development. In summary, knowledge of cognitive development can help create effective, engaging, and age-appropriate products and services that promote cognitive development in the target audience across different industries.

Pillar 2: Goal Setting

Goal setting refers to identifying and setting achievable objectives that can help children improve their skills, learn new things, and develop a sense of purpose and achievement. Children at this age are capable of understanding the concept of goal setting and can benefit from having clear and achievable goals that can help them stay motivated, focused, and engaged. Goal setting can also teach children important life skills such as time management, planning, and perseverance.

Understanding goal setting for children aged 6-12 can impact game design in several ways. Game designers can incorporate elements that help children identify and achieve goals in a fun and engaging way. Games can provide a safe environment for children to set and achieve goals, as well as experience a sense of accomplishment and satisfaction upon reaching them. Game designers can use their understanding of goal setting to create games that promote cognitive development and teach important life skills such as time management, planning, and perseverance while providing a fun and engaging experience.

Acknowledging goal setting for children aged 6-12 is useful in publishing, marketing, and business intelligence. Publishers can design interactive publications that motivate children to achieve their goals. Marketers can tailor campaigns and advertisements to highlight how their products or services can help children achieve their goals. understanding goal setting for this age group can help create engaging and motivating products and services that meet children's developmental needs

Pillar 3: Performance Feedback

Performance feedback for children aged 6-12 refers to the process of providing children with information about their performance in a specific task or activity. This feedback can be positive, negative, or neutral and can be delivered verbally, non-verbally, or through written communication. Feedback can help children identify areas where they excel and areas where they can improve, and it can also provide motivation and encouragement to continue learning and growing.

Performance feedback can impact game design in several ways. Game designers can incorporate feedback mechanisms that help children identify areas where they excel and areas where they can improve, and provide motivation and encouragement to continue playing and learning. Game designers can use their understanding of performance feedback to create games that promote cognitive development and teach important life skills such as perseverance, problem-solving, and goal-setting while providing a fun and engaging experience.

Performance feedback for children aged 6-12 can be used in publishing, marketing, and business intelligence to create engaging and motivating experiences that promote learning and development. Publishers can design interactive materials that provide feedback on progress and performance, while marketers can highlight products that promote skills through feedback. Performance feedback is a valuable tool for promoting cognitive development and teaching important life skills.

Pillar 4: Role Models

Role models, for children, are individuals or characters that children look up to and aspire to be like. These can be parents, siblings, other family members, friends, teachers, coaches, or public figures such as athletes, musicians, or actors. Children at this age are highly influenced by the people they interact with, and they often model their behavior, attitudes, and beliefs after those they admire.

Understanding the importance of role models can impact game design in several ways. Game designers can incorporate positive role models in their games, using characters and scenarios that inspire children to pursue their goals and develop positive character traits. A modern example of this would be the character development of Sora from the popular kingdom hearts series who always tries to do the right thing.

By featuring characters from diverse backgrounds and cultures, publishers and marketers can promote empathy and understanding. Campaigns can be designed to appeal to children aged 6-12 by using characters

or public figures that they look up to, aligning with their values and aspirations. Overall, understanding the role model pillar can inspire children to be their best selves and promote positive values and character traits.
