Factory Gauntlet

Level Design Document

Level Designer: Airron Kennedy

Level Theme: Factory

Player Goal: Transverse the factory while scavenging for food and items. After entering the building, the door shuts behind you and you are forced to find another way out.

Progression Type: IPTM

Featured Level Mechanics:

1. **Activate pressure plate** - The player must stand or place objects on a pressure plate in order to open the factory doors.
    a. Core Action: The player must stand on a pressure plate to open doors.
    b. Interactive Object: Pressure plate.
    c. Success Event: A door will open allowing the player to progress.
2. **Throwing objects onto a switch** - There are many switches that the player cannot reach himself due environment in the way so the player must find objects to throw onto switches to unlock doors
    a. Core Action: Find an object that can be used to trigger a switch.
    b. Interactive Object: Switches that are out of the players reach
    c. Success Event: When the player has found an object to throw and throws it at an unreachable switch, a door will open.

Level Mechanic Setups:

1. Introduce Level Mechanic 1
    - After reaching the entrance to the facility, the player notices a pressure plate that will open the first door. He quickly realizes that the door closes after a couple seconds and must rush through the door before it closes.
2. Introduce Level Mechanic 2
    - The player notices that there is a broken ladder that leads to the switch controlling the second door. The player must find an object in the room to throw at the switch to get it to open.
3. Practice Level Mechanic 1
    - The player notices a pressure plate across the room from the door. After standing on the plate, the door opens but quickly shuts the second the player gets off the plate. The player must find an object in the room to keep the pressure plate activated so he can continue through the door.
4. Practice Level Mechanic 2
    - The player notices a switch that will activate the next door, but due to debris and broken lockers, the player is unable to reach the switch. The player must find an object and throw it over the lockers to hit the switch and unlock the door.
5. Twist Level Mechanic 1 with 2
    - The player must stand on a pressure plate that opens a door to the first factory floor. The door only opens for 15 seconds so the player must quickly locate an item and bring it back through the door in order to throw it at a switch that is out of reach to the player. This unlocks the lift which takes you to the parking garage. The speed factor makes this mechanic more intense because if not completed quickly, the player must walk around the entire facility to get back.
6. Master Level Mechanic 1 with 2
    - The player can step on a pressure plate that opens a hatch on the side of the wall. Inside of the hatch is a switch that can be activated by throwing an object at it but the player must be standing on the pressure plate while he throws the object. This makes

the mechanic more intense because not only does the player have to make a skilled throw, but also is forced to stand in a single position.
