NavAgent State Machine — Screenshot Evidence

Project brief

This image preserves evidence submitted for a NavAgent state-machine assignment. It supports discussion of how navigation and behavior states relate to a game agent’s actions. Alongside the player-flow research and Unity samples, it connects a conceptual AI topic with engine-based coursework. The portfolio presents the screenshot as supporting evidence, not a substitute for missing project files.

Ownership

Coursework submission author

Evidence focus

Explain which aspects are visible in the screenshot and which require source or a live demonstration. That distinction is part of clear technical communication.

Scope

No standalone project or playable build was recovered with this image, and no new behavioral test was performed.

Skills

Behavior-state concepts, navigation, implementation communication
