Airron Kennedy

Design. Test. Build.

Game systems • Unreal prototypes • Player research • Community software

A guided route from case study to original evidence.

One portfolio, several connected capabilities

Systems design

Rules and balancing

Implementation

Unity / Unreal / Discord

Player experience

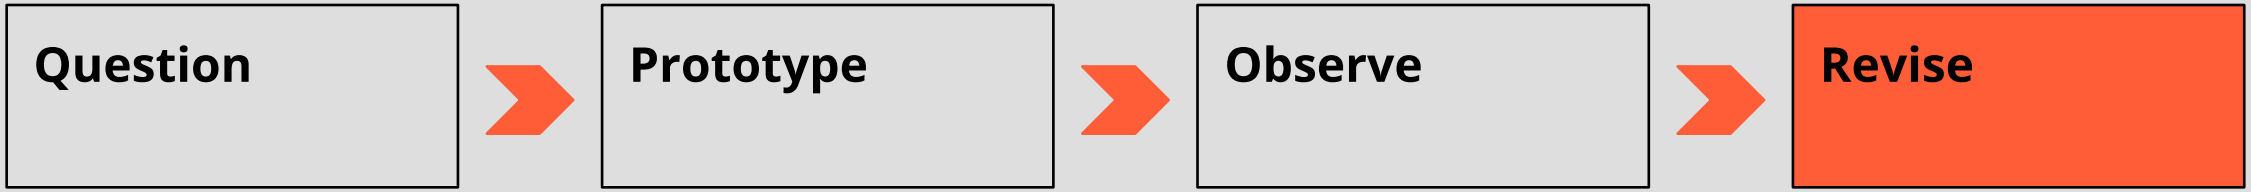

Player research

Studies and synthesis

Production

Milestones and evidence

The common method: make a decision inspectable

Collection Revenge connects observations to rule changes across eight documented playtest rounds.

Evidence matters more than a claim that every experiment succeeded.

Revived by Ally protects player agency

Observed problem

Repeated turn-skipping could leave an opponent stalled.

Documented response

Revise piece effects and limits so both players keep participating.

Solo rules + playtest journal. A balancing story, not a commercial-release claim.

Collection Revenge evolves through eight tests

1 Map perspective

2 Path choice

3 HP and capture

4 Random battles

5 Recovery

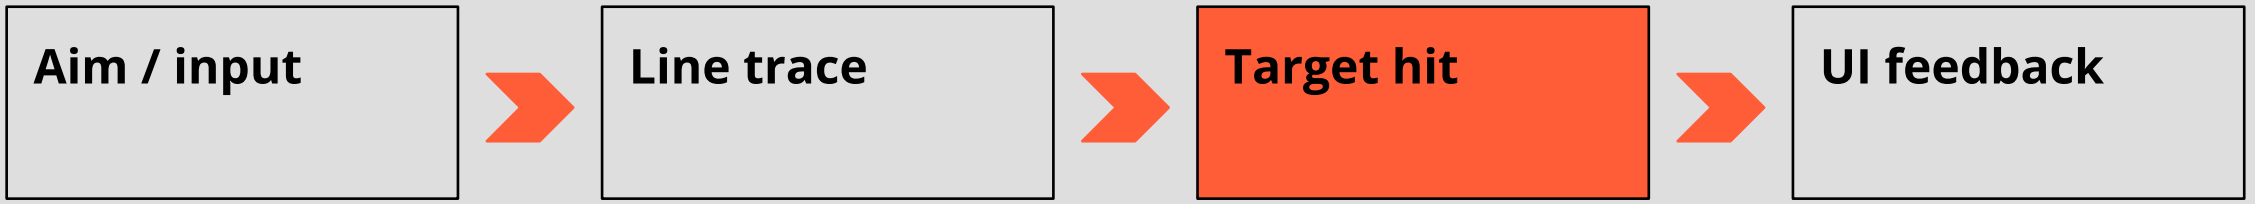

6 Leech Life

7 Reroll agency

8 Enemy timing

Qualitative observations; a physical model does not reproduce every real-time FPS constraint.

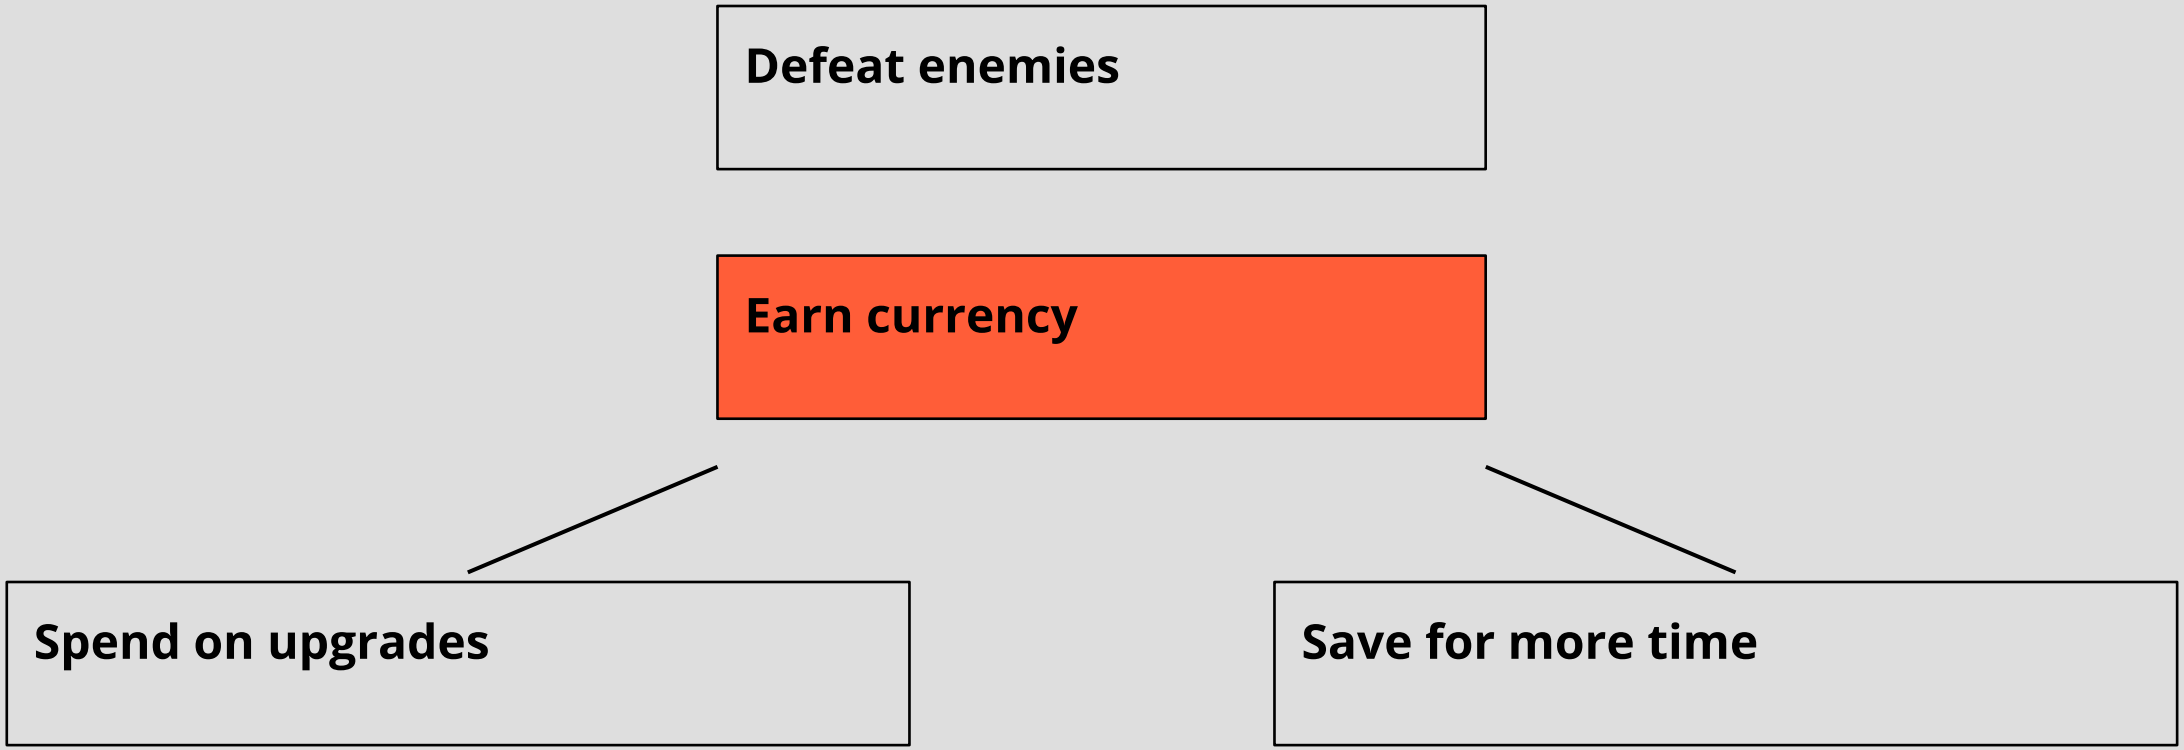

Gun Game turns a shot into visible feedback

Unreal Blueprints: adapt a default-template gun into hitscan behavior, target response and timer UI.

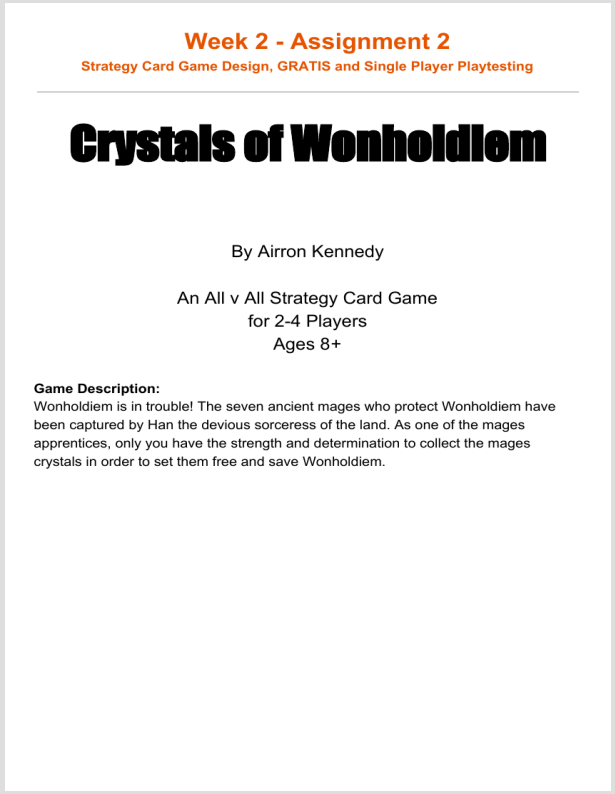

Credit template/tutorial foundations. Verify timer wording against the demo.

Arena Battler makes time a design tradeoff

Personal evidence: concept, pitch, Blueprint work and weekly contribution log within a team project.

Crystals of Wonholdiem makes rules reviewable

Week 2 - Assignment 2

Strategy Card Game Design, GRATIS and Single Player Playtesting

Crystals of Wonholdiem

By Airron Kennedy

An All v All Strategy Card Game
for 2-4 Players
Ages 8+

Game Description:
Wonholdiem is in trouble! The seven ancient mages who protect Wonholdiem have been captured by Han the devious sorceress of the land. As one of the mages apprentices, only you have the strength and determination to collect the mages crystals in order to set them free and save Wonholdiem.

Strategy card game

Two to four players compete to collect seven elemental crystals.

Closing-design revisions clarify setup, hand limits and action limits.

Source page shown; single-player playtesting is not a large user study.

Utopianaries' Vision connects intent to testability

High concept: FPS + MOBA

Systems: actions and progression

QA: features and requirements

Team GDD and separate QA research. Credit coauthors; do not imply every described system shipped.

Battletoads asks what onboarding actually teaches

10

participants

30

minutes per session

Pre-survey → play → post-survey

Consistent controller, difficulty, seating and audio. Coauthored with Angelo Bowins and Valerie Rubio.

Small convenience sample; verify inconsistent percentages before charting results.

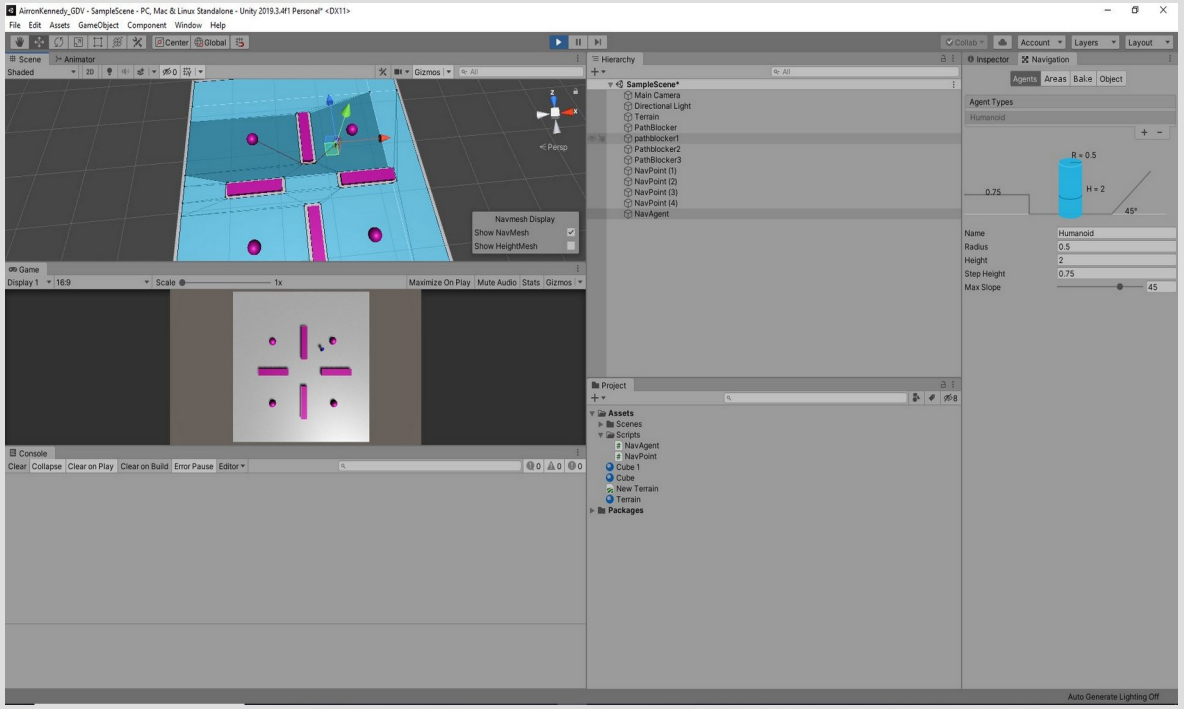

NPC and flow research develops across versions

July 2022	November 2022	April 2023	May 2023
Methods / UX	Research paper	Usability journal	Applied thesis

A sustained inquiry into NPC design, AI concepts, immersion and player flow.

Academic synthesis, not a claimed production AI deployment.

Unity samples expose implementation foundations

Input / button logic

Game state / manager

Pong • Vector • TicTacToe • LightsOut

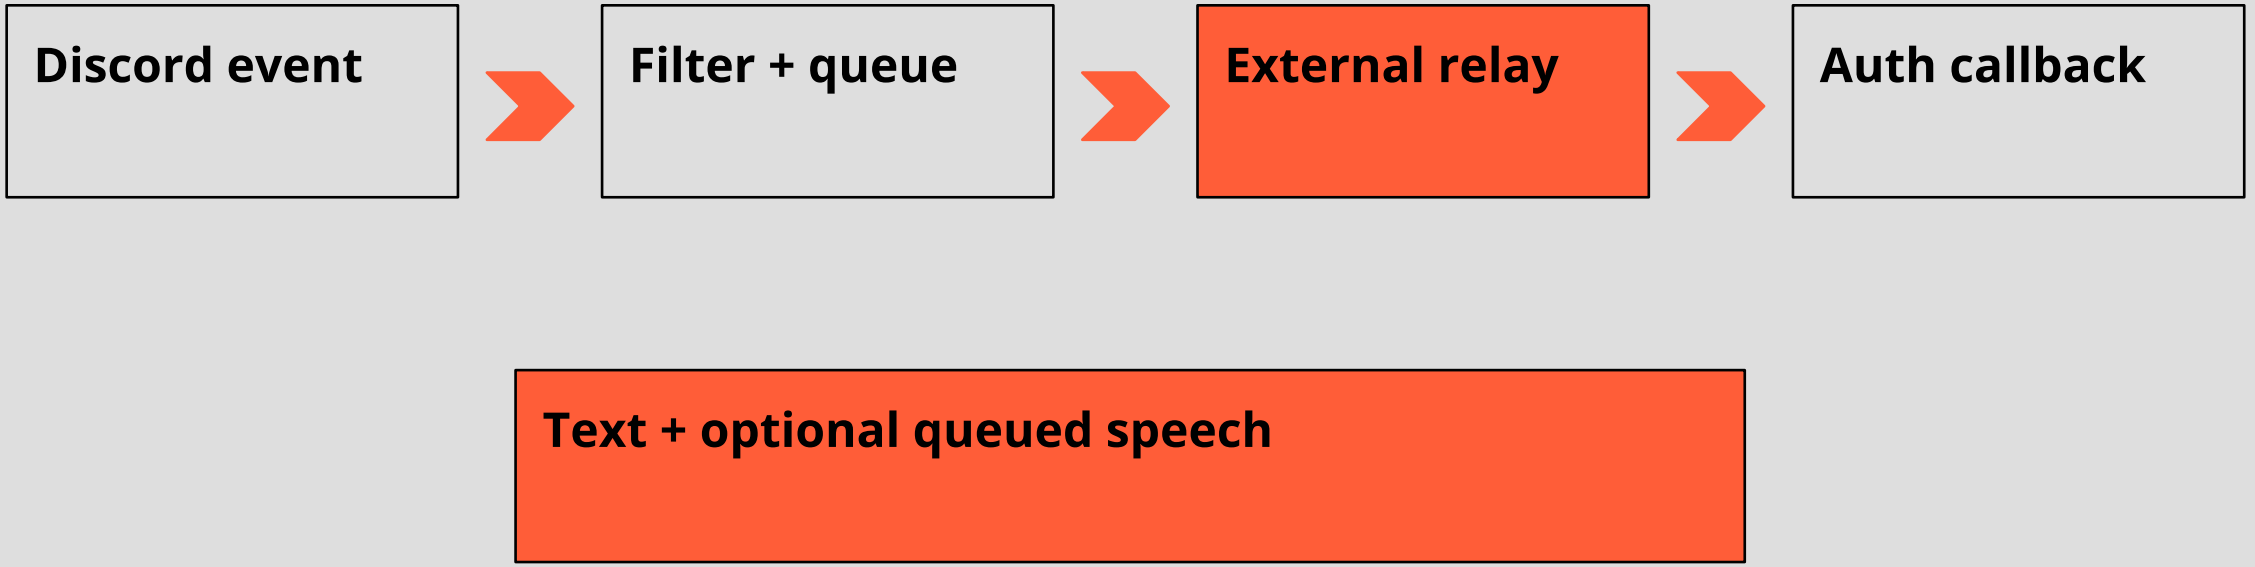

Extracted C# supports inspection. Packages still need compatible-editor launch testing.

Production evidence shows the work behind a prototype

Artifact	What it supports
Task lists	Scope and remaining work
Work logs	Recorded tasks and time
Burndown / burnup	Progress communication
Postmortem	Reflection and collaboration

Robo-Intero personal workbooks are native Sheets. Logs are source records, not independently audited performance statistics.

Airronbot separates integration from AI generation

TypeScript / Discord.js / Express / React. AI-assisted personal project; relay is a separate dependency.

Published status is not proof of a new end-to-end Discord or voice test.

The website is a route into the evidence

HTML / CSS / JavaScript • Responsive navigation • Accessible labels • Reduced-motion handling

One public GitHub website repo verified. Normal HTTPS currently returned HTTP 200; the earlier certificate issue was not reproduced.

Choose the evidence that fits the role

Role	Lead with
Game design	Revived by Ally · Collection Revenge · Arena Battler
QA / UX	Battletoads · QA requirements · NPC / flow
Production	Contribution log · Workbooks · Postmortems
Junior development	Airronbot · Unity C# · Website source

Open the case study, then inspect the original. Separate personal work, team work and proposed next steps.
