Airron Kennedy — QA / UX Tester

Role profile · draft

Usability-study planning, testable requirements, mechanic feedback and clear research limitations.

Selected project evidence

Battletoads — Game Testing Study — Co-researcher with Angelo Bowins and Valerie Rubio. Our team investigated how clearly the Battletoads remaster introduces its early mechanics. Ten participants played thirty-minute sessions under consistent controller, difficulty, seating and audio conditions, with pre- and post-session surveys. The report examines onboarding, combos, character selection and collectibles against the team’s hypotheses. It supports a discussion of how apparently clear instructions can still leave mechanics undiscovered or unused.

Utopianaries’ Vision — QA Development Research — QA-development research author; related design is team work. This QA development-research presentation takes game goals and core actions and breaks them into features and requirements. It complements the Utopianaries’ Vision GDD by providing a more test-oriented view of the same concept. Enemy AI and other systems can be discussed in terms of what they are intended to do and what would need to be evaluated. The artifact shows the connection between design communication and planning for verification.

Gun Game — Unreal Hitscan Prototype — Designer and Blueprint scripter. Gun Game is a focused target-shooting prototype built in Unreal Engine. I adapted the default-template gun from projectile behavior to a line trace for hitscan shooting, then connected target response and timer feedback. The breakdown presentation explains the implementation, while a separate feature-lock checklist shows the compact intended scope. Together with the demonstration, these artifacts make it possible to review both the mechanic and the reasoning behind it.

Skills evidence

Usability study design, operational variables, data analysis, limitations, QA planning, features and requirements, system decomposition, testability, Gameplay implementation, feedback, scope control, technical explanation

Education context

Full Sail University — Game Design coursework and applied-thesis artifacts through May 2023. Exact awarded-degree wording and current employment history should be confirmed before applying.

Review boundary

New project-focused draft, not an approved final application resume. Employment chronology is intentionally omitted pending verification. No historical private resume content is included. Software work is AI-assisted; team artifacts are credited as team work.
