# TicTacToe — Unity Diagnostic Package

## Project brief

TicTacToe is preserved as a Unity package rather than a standalone executable. Its DiagnosticButton and DiagnosticGameManager scripts provide a focused view of interaction and overall game-state logic. A linked Trello board preserves the project’s task-tracking reference. The small scope makes this a useful sample for explaining state transitions and testing repeated or invalid input.

## Ownership

Unity coursework implementer

## Evidence focus

Follow an interaction from a button into the game manager. The source inspection identified separate button and manager responsibilities.

## Scope

Import and test in a compatible Unity project before presenting a fresh playable build. External Trello access may depend on the original board permissions.

## Skills

Interaction logic, game state, win conditions, task tracking
