Unity Navigation System — Screenshot Evidence

Project brief

This submission preserves screenshot evidence of Unity navigation work. It adds a visible engine-workflow example to the broader collection of scripting and systems artifacts. The image is useful when discussing the setup and intended role of navigation in a scene. I keep its scope explicit so a supporting screenshot is not mistaken for a recovered, complete game project.

Ownership

Coursework submission author

Evidence focus

Use the image to orient a discussion of the scene and navigation workflow, then distinguish visible evidence from implementation details that would require the missing project source.

Scope

Screenshot only. It does not prove a complete playable build, recovered source or tested production AI system.

Skills

Navigation concepts, engine workflow, technical communication
