Selected Game: Borderlands 2 Game Link

World Summary

Environment

Pandora, a wasteland planet. The environment is left with mostly sand, vegetation only grows in controlled areas.

Laws Of Nature

The low gravity of the planet prevents fall damage.

Most inhabitants of pandora will try to kill you.

Population

The people who inhabit pandora are hardened folk who have the appearance of people who have had to fight for their lives for the right to live where they do.

Enemies

The enemies of pandora are numerous, from the locale wildlife to the capitalist company hyperion who will try to take over the planet.

World Summary cont:

Population Cont:

Not every person you meet is what they seem, as pandora is essentially lawless, you do not know who you can trust. Least trustworthy of all is the mad man handsome jack, the CEO of hyperion. His hunt for vault hunters is unceasing as he wants the planets secrets for himself. Jacks rain of terror has created many enemies for him, enemies that could potentially help you because of a mutual opponent.

Tech

The technology on pandora is a mix between classic primitive weapons along side of advanced weaponry that has been modified to use the elements of pandora (Incendiary, Slag, electric, corrosive, and blast). Vehicles have been made but are limited to a pre built model.

Name: V1ct0r

The Vehicle Character

Full Object Breakdown

- V1ct0r is a tank/support character, he is meant to be on the front lines where he can properly get between bullets and his friends with his sword and shield fighting style.
- His support aspect allows his to support his teammates with a shield ripped off of an hyperion BUL loader.
- V1ct0r's main ability will be used to pull out his sword and shield, his robot half takes control to properly deal with the enemies in his way.
- As standard with borderlands 2 characters, V1ct0r will have 3 skill trees. The first will revolve around your "tankiness" providing health boosts and proximity healing. The second will focus on his shield in regards to blocking projectiles shot at himself and his allies, this will be a support tree for players who enjoy playing co-op. Lastly, his final tree deals with his sword, applying buffs to himself and going into a "frenzy" state to disarm all enemies in the area.

Appearance

- Name: V1ctOr
- Age: 24 years old
- Gender: Male/unknown
- Build: 6'2", muscular mixed with machine parts from the hyperion robots
- Race/ethnicity: Dark skin
- Hairstyle: Short dark hair
- Make-up/scars: Scars all over his body due to his cyborg transformation
- Facial structure: Defined facial structure where you can see parts of it merging with technology
- Costuming: As a half cyborg,V1ctOr will have one of his arms and legs gone and replaced with robot parts, his arm replacement goes over his shoulder and starts to lead into his neck/head

Backstory

- V1ctOr is a cyborg, half human and half hyperion tech. Once a bandit himself, V1ctOr always prioritized himself over his bandit mates. When attacking a hyperion convoy, the mission went south in an event that left V1ctOr as the last surviving member of his squad. Clinging for life, V1ctOr fused his very body with the remnants of the hyperion robots he dismantled in combat. Now alone, V1ctOr has a vengeance against hyperion and will relentlessly try to stop their future plans, whatever they might be.

- Being a bandit on pandora did not properly educate V1ctOr in the way of the world so many of his actions are not well thought out in comparison to his cyborg half.

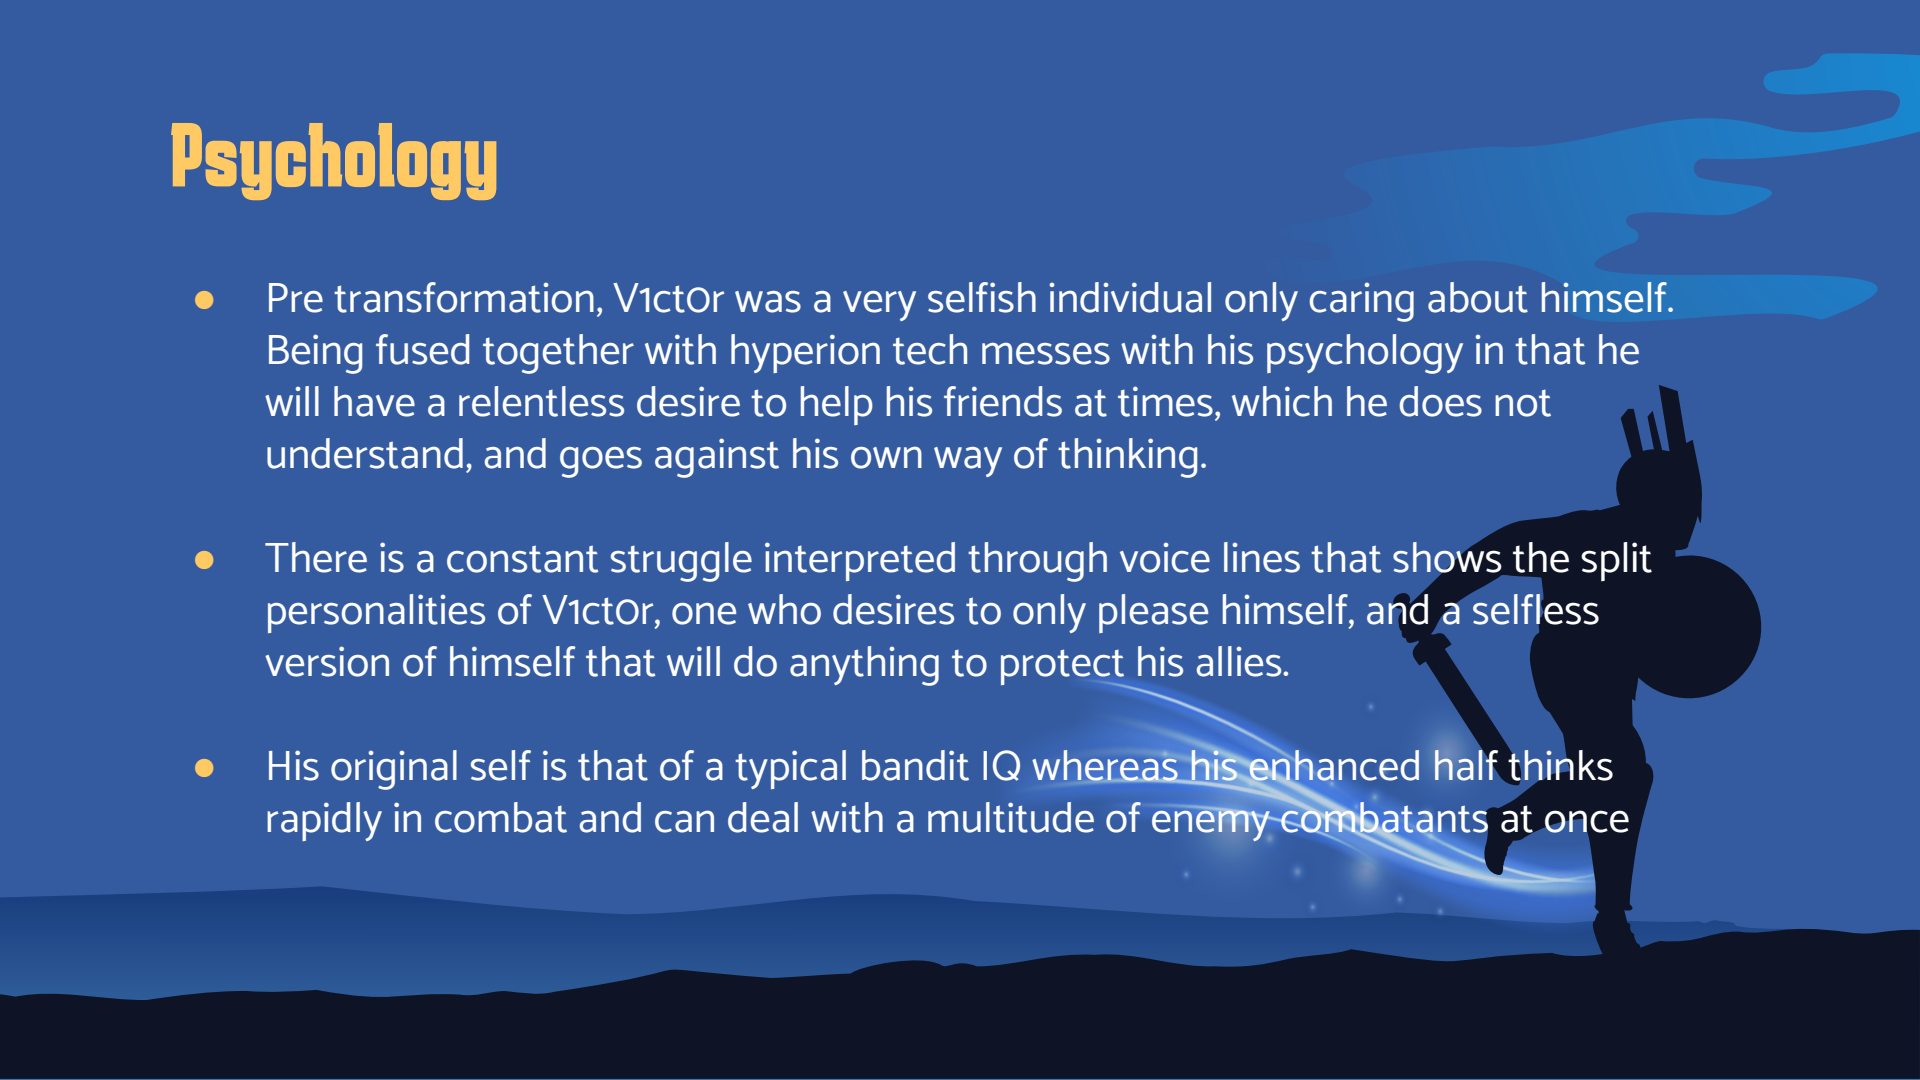

Psychology

- Pre transformation, V1ctOr was a very selfish individual only caring about himself. Being fused together with hyperion tech messes with his psychology in that he will have a relentless desire to help his friends at times, which he does not understand, and goes against his own way of thinking.

- There is a constant struggle interpreted through voice lines that shows the split personalities of V1ctOr, one who desires to only please himself, and a selfless version of himself that will do anything to protect his allies.

- His original self is that of a typical bandit IQ whereas his enhanced half thinks rapidly in combat and can deal with a multitude of enemy combatants at once

Social standing

- V1ct0r has an advantage over human enemies as he is enhanced by his robot counterpart. This gives him an theoretical edge in combat.
- As a bandit cyborg, bandits will attack him on sight after seeing that he has fused with hyperion, their enemy.
- V1ct0r seems more powerful than the average enemies you encounter but still pales in comparison to the full might of handsome jack and his hyperion robot army.

Customization system

This system coincides with borderlands 2's current system of prefixes to determine main stats of weapons. for this purpose, it will be used for character customization

Prefix system:

- This will be used to customize your character by multiclassing.
- The prefix you select will determine your characters respective main ability
- The prefix determines abilities/skill trees, not physical features.

Core prefixes:

- "Gun" - prefix for Gunzerker class
- "Command" - prefix for commando class
- "Assassin" - prefix for Assassin class
- "Siren" - prefix for siren class
- "Mechro" - prefix for mechromancer class
- "Psy" - prefix for psycho class
- "Knight" - Prefix for Knight class

Customization system cont:

Prefix system:

- Players will be able to choose character gender and voice built on the existing character models
- Custom color and hair features are already present in the game, these will be used to customize your character's appearance before you start the game
- As accustomed to borderlands progression system, players will have 3 skill trees, one that is determined by the prefix, this skill tree regards the players main ability so no matter what, your character has a sense of balance and understanding your role in the game (tank, brawler, glass cannon, support, ect"
- Each class has 3 skill trees respectively
- The other 2 skill trees can be chosen between the remaining 5 skill trees based on the multiclass you have chosen. (multiclassing - a combination of 2 classes)

Customization system example:

"Command" zerker - multiclass between the commando and gunzerker.

- The command prefix determines the ability and 1st skill tree, in this case, it is the commando's turret ability paired with the commando "Gunpowder" skill tree which enhances the characters turret.
- The other 2 skill trees are chosen between the remaining 5 available skill trees for the 2 classes:

Commando Skill Trees:

- Guerilla tree
- Survival tree

Gunzerker Skill Trees:

- Brawn tree
- Gun Lust tree
- Rampage tree

Customization System Wireframe

- 7 main classes
- 7 subclasses
- 49 combinations of character multiclasses
- Even more skill tree combinations
- Personalized character customization and bio to give your character meaning.
