Vector Game Portfolio — Unity Archive

Project brief

The Vector Game Portfolio archive preserves another Unity coursework project with scenes, assets and project files. The inspected scripts include player behavior, a start page and win/lose handling. I include it as evidence of implementation foundations rather than labeling it a ready-to-run web game. The archive can support a technical conversation after its original editor and dependency requirements are restored.

Ownership

Unity coursework implementer

Evidence focus

Use the Player, STARTPAGE and Winlose samples to identify how input, state and scene flow were organized. Keep engine-generated content separate from project-specific logic.

Scope

Launch compatibility has not been tested. The mapped course title is retained, and no unsupported genre, shipping status or user metric is added.

Skills

Gameplay scripting, state handling, project organization, debugging preparation
