High Concept

Utopianaries' Vision is all about controlling the battlefield. This includes high-action FPS mechanics combined with strategic MOBA progression systems to create a unique gameplay experience for our players. As a different approach to the traditional MOBA style, Utopianaries Vision provides familiarity, inviting all gamers to enjoy the experience. The game's modern fantasy aesthetic paired with polished mechanics and well-designed systems will attract a multitude of gamers from many genres.

Mission Statement

Our team's mission in the creation of Utopianaries' Vision is to make an iteration of classic “MOBA Style” that is more user-friendly from a gameplay standpoint. This is done by combining unique MOBA aspects with the more popular FPS perspective. In turn, this allows players to gain a better understanding of how the game is played because they already know the fundamentals of FPS games.

Player Hook

Utopianaries' Vision is a very inclusive concept in terms of mechanics, you will quickly understand the fundamentals of the game because the perspective and core mechanics are that of games you have played in the past. Although you will have a basic understanding of the game, there are still mechanics and gameplay that will be fresh and adapted to the new FPS/MOBA style. This mix of old and new mechanics will create unique experiences for you, the player.

Game Vision

Unique Selling Points

- **Low initial skill floor** - Players will understand the basics of the game quickly (as opposed to traditional MOBA design)
- **Familiar perspective** - FPS games are one of the most popular genres, with this in mind, Utopianaries' Vision aims to attract FPS players by keeping familiar FPS mechanics.
- **New gameplay objectives** - With this fuse of game genres, our player base will be met with new mechanics to the FPS playstyle.
- **Interesting aesthetic and story** - Utopianaries' Vision's premise of fantasy allows for many different and intriguing designs of areas, characters, enemies, and user interface.

Audience

FPS players - This game will attract Fps players in that it requires teamwork and calculated gameplay to acquire victory

- Makeup 47% of all gamers
- 59% of Teen/Mature gamers are playing FPS

MOBA players - Fans of traditional MOBA's will understand the flow of the game. This familiarity will allow players to understand what they are playing, paired with the common Fps perspective to create unique gameplay

- 52% of total gamers play on PC

Introducing a new style of gameplay to the vast FPS community

Genre

FPS/MOBA Hybrid

FPS - Gameplay/player perspective

MOBA - progression system, Leveling system, AI systems. win/lose conditions

Rating

T for Teen- A large amount of FPS gamers

Minimum requirements (Projected)
OS Windows 7
CPU Intel core 2 duo
GPU Intel HD 4000
VRAM 1GB
RAM 4

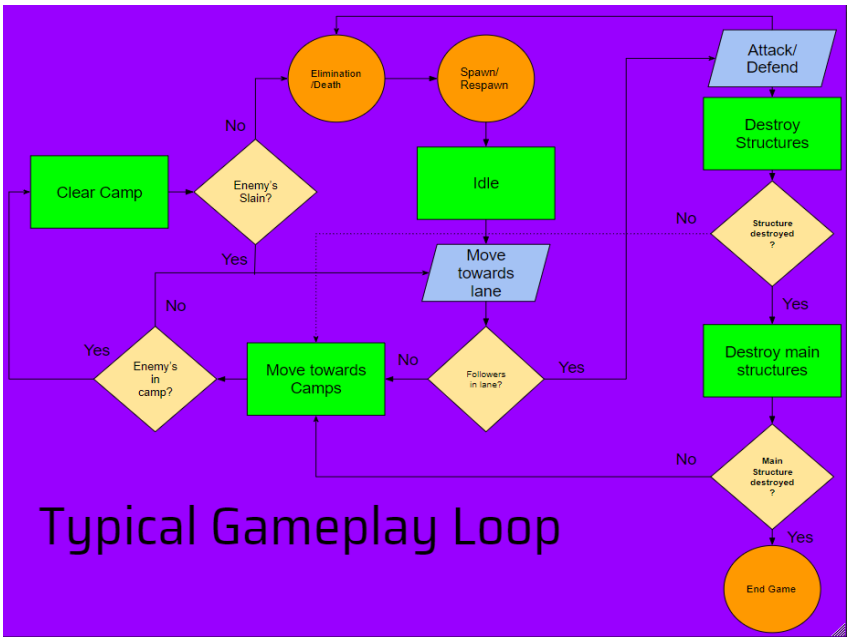

Software

- Unreal
- Google Calender
- Blender
- Audacity
- Microsoft visual studio

Gameplay & Mechanics

Overview of Gameplay

The game will start with the player spawning and being tasked with defending their main structure. There will be 2 sub-structures that the player must also defend so the enemy team does not invade your main base area. Simultaneously, the player must attack the enemy's sub-structures in order to invade their base and destroy their main structure. Players will also have opportunities for additional exp through clearing jungle camps. Exp is used to level up and gain an advantage over your enemy. The game ends when either the player's main structure is destroyed or if the player has successfully destroyed the enemy's main structure.

Gameplay Guidelines

It is important to design the enemies in a way that coincides with the FPS POV. the translation between MOBA and FPS must be formatted so the experience is meant for a First person camera. It is also important to remember the level of verticality in FPS POV as opposed to the traditional top-down of MOBA's. Lastly, the gameplay is meant to create a feeling of an underdog situation where the player must adapt to their game.

Player Experience

Players will experience the fast pace of an FPS game with the mechanics of a MOBA. This includes the progression system of leveling from 1-20 each game. Players will be tasked with defending and attacking structures to increase their level, as well as clearing out enemy camps that are located off of the main path. Leveling up allows players to upgrade abilities which loops back to destroying structures and clearing camps faster. These gameplay loops will give the player feedback that they are successfully playing the game correctly.

Core Player Actions

- Movement/jump - used to maneuver the map
- Abilities - used to attack/defend from enemies
- Exp gain - Leveling up
- Destroying structures - win condition
- Enemy camps - Used to gain exp
- Basic Attacking - used to engage with enemies in the map

Goals

Main Goals:

- Destroy the enemy's main structure

Sub-Goals:

- Destroy the enemies' sub-structures

Moment-To-Moment Goals:

- Manage followers in the area
- Defend structures
- Clearing camps
- Attacking enemies

Rules

Foundational rules:

- Players will spawn/respawn in their base
- The enemy structures cannot be destroyed unless the previous one has been destroyed.
- Players will gain EXP from killing enemies
- Player will respawn from elimination after a set amount of time
- If the players health reaches 0, they will be eliminated
- If a structures healths reaches 0, it is destroyed.
- Enemies will be eliminated if their health is 0
- Enemies will spawn/respawn on a set time
- Enemy camps will spawn/respawn on a set time
- Players will have access to 3 different abilities
- The game will end when either main structure is destroyed resulting in a win/loss

Operational rules:

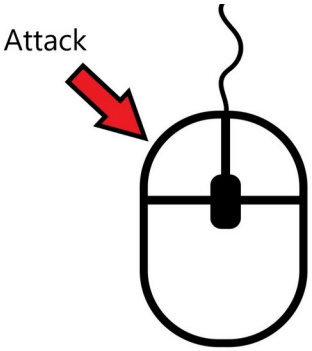

- Players will spawn in their base
- Players will be tasked with defending/attacking enemy structures
- Destroying towers allows the next one to be destroyed
- Destroying the enemies main structure will result in a win

Control Scheme

- Attack
- Movement Speed

Structures
- Health
- Attack
- Attack Speed

Main Structures
- Health
- Attack Speed

Game
- Structure count
- Must destroy structures before taking out the main structure

Level Design

Setting Overview

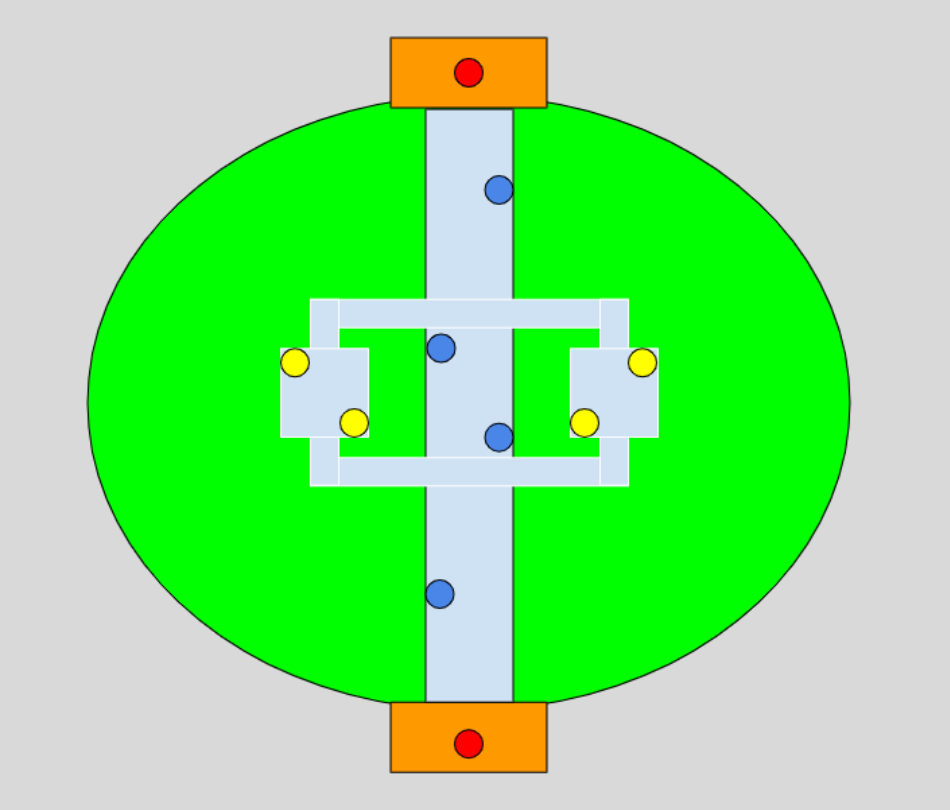

Utopianaries vision's setting is a modern-fantasy style design. Many of its aspects are inspired by modern suburban areas that have been turned into ruin because of frequent fighting in the area. The fantasy aspect allows for creativity in enviroment with vibrant colored plants that have been effected by "will" (The Force of power in this world). The weather will be sunny at all times, no clouds in the sky, this will add to the visuals of the buildings and environment. The buildings will showcase broken down building with cracks down them. The main area of combat for this game will be more structured, less broken down. The area has been recreated by the utopians will.

Level Overview

The battleground of Utopianaries vision is one single map. This map will consist of 4 jungle camps and 6 structurses including 2 main structures. The Jungle enemy camps will be used to give the player additional exp when playing. They must go off the main path and explore the other areas of the map to find them but they will gain an advantage. The main objectives of the

game will be found on a single road that splits up the map vertically. The enemy main structure is located at the end of the road so the player must make their way up the map to be able to win the game.

Level Mockups

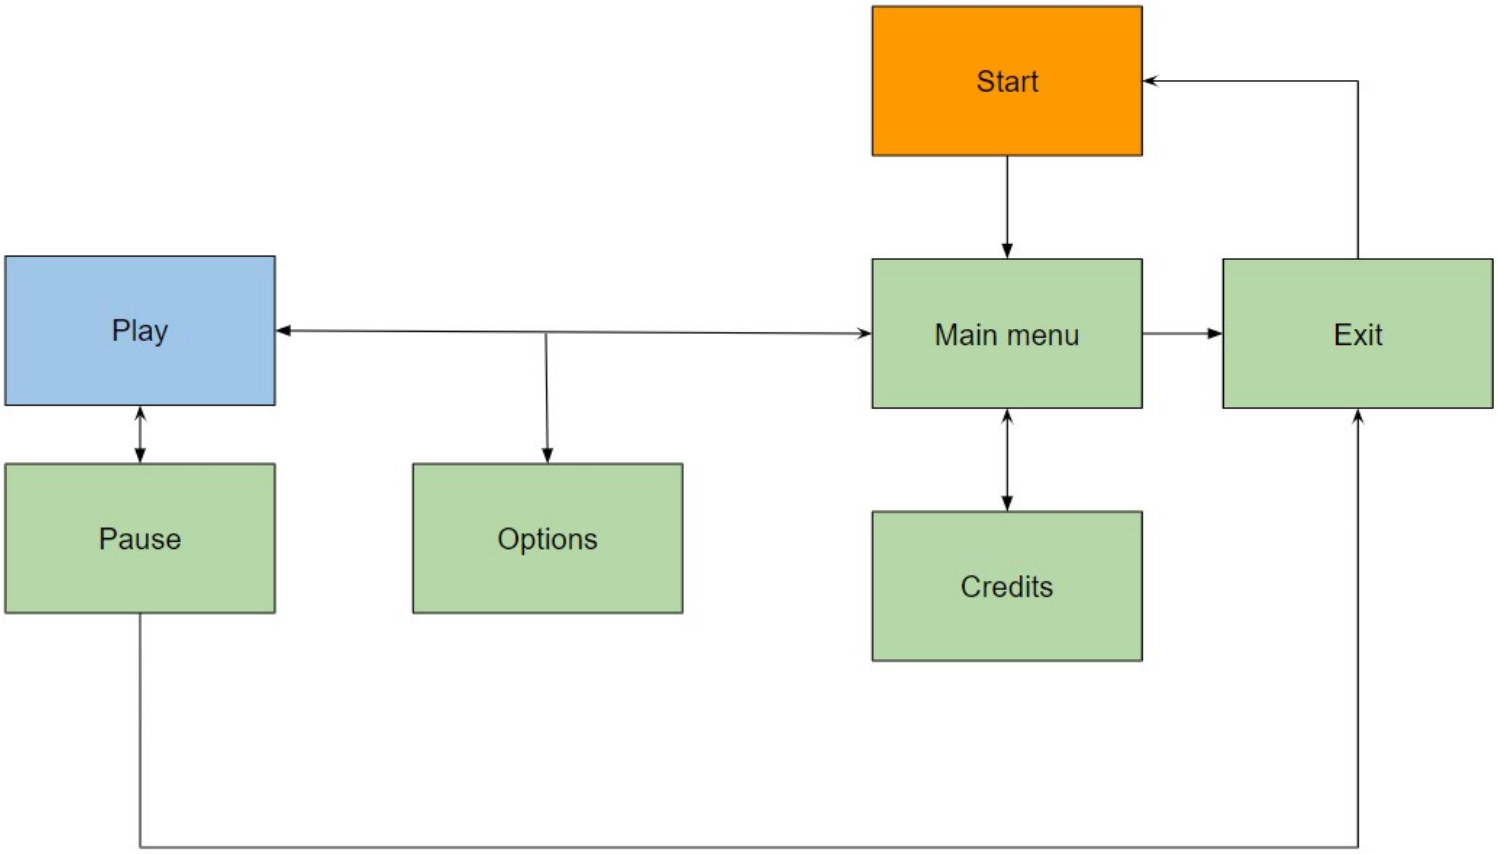

User Interface Design

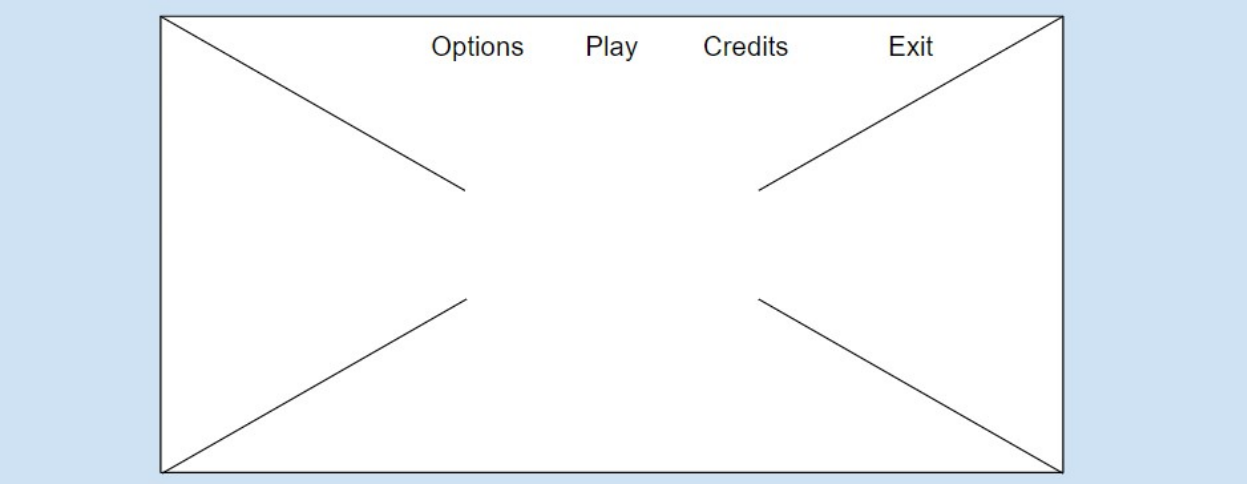

Aesthetics

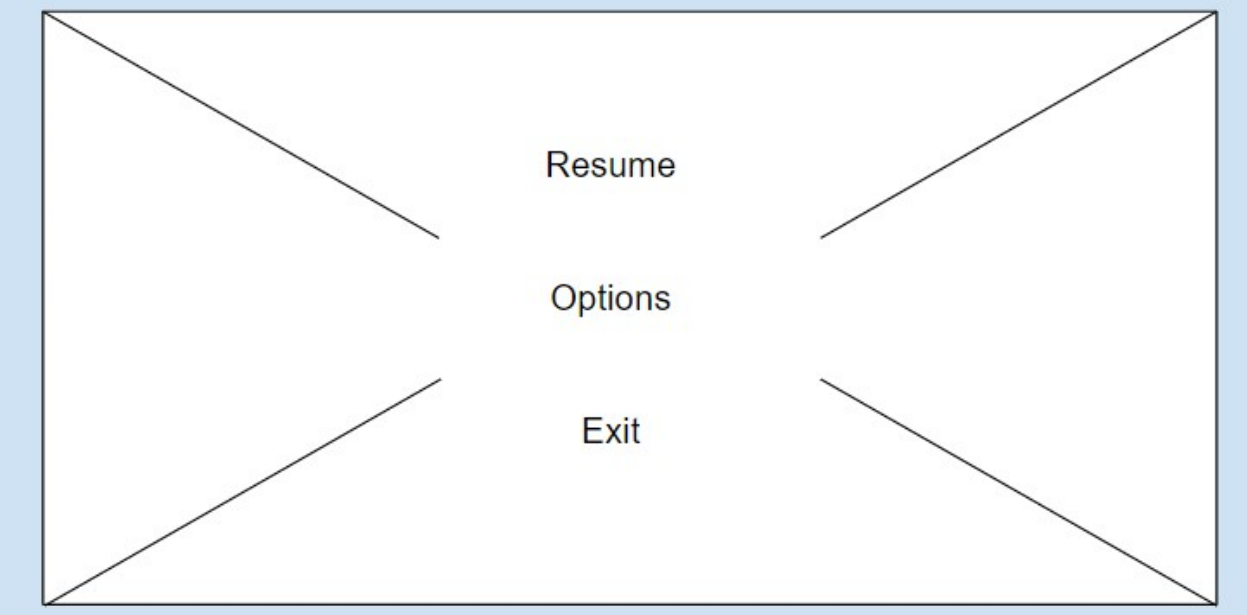

Sleek modern look. UI and font are sharp to match the modern look of the game.
Abilities will have a transparent look on them not to interfere with the intended minimalist look in the HUD.

Narrative Design

Plot Outline

Utopianaries vision is all about controlling the battlefield with your respective "Will". With the world ending due to species corruption, the remaining people look to the Utopianaries with the hope that they will create a world suitable for everyone to live in. With numerous Utopianaries, all with the vision and abilities to change the world in their image, there is a power struggle between these characters in that they all desire to impose their “Will” upon other Utopians. Followers are loyal to their overarching utopianarie due to the immense "Will" that is exposed to them. This makes them the perfect minions to rush into battle to see that their leader's will is done.

Will is the "Force" in this game. An invisible entity that selects its leaders to carry out its power. This force does not have a preference to go or evil, they simply choose those who have an intense desire to live by their ways. The origin of this power is unknown to the player and has little influence over the utopian's decisions. Its main function is to act as a power source for these individuals.

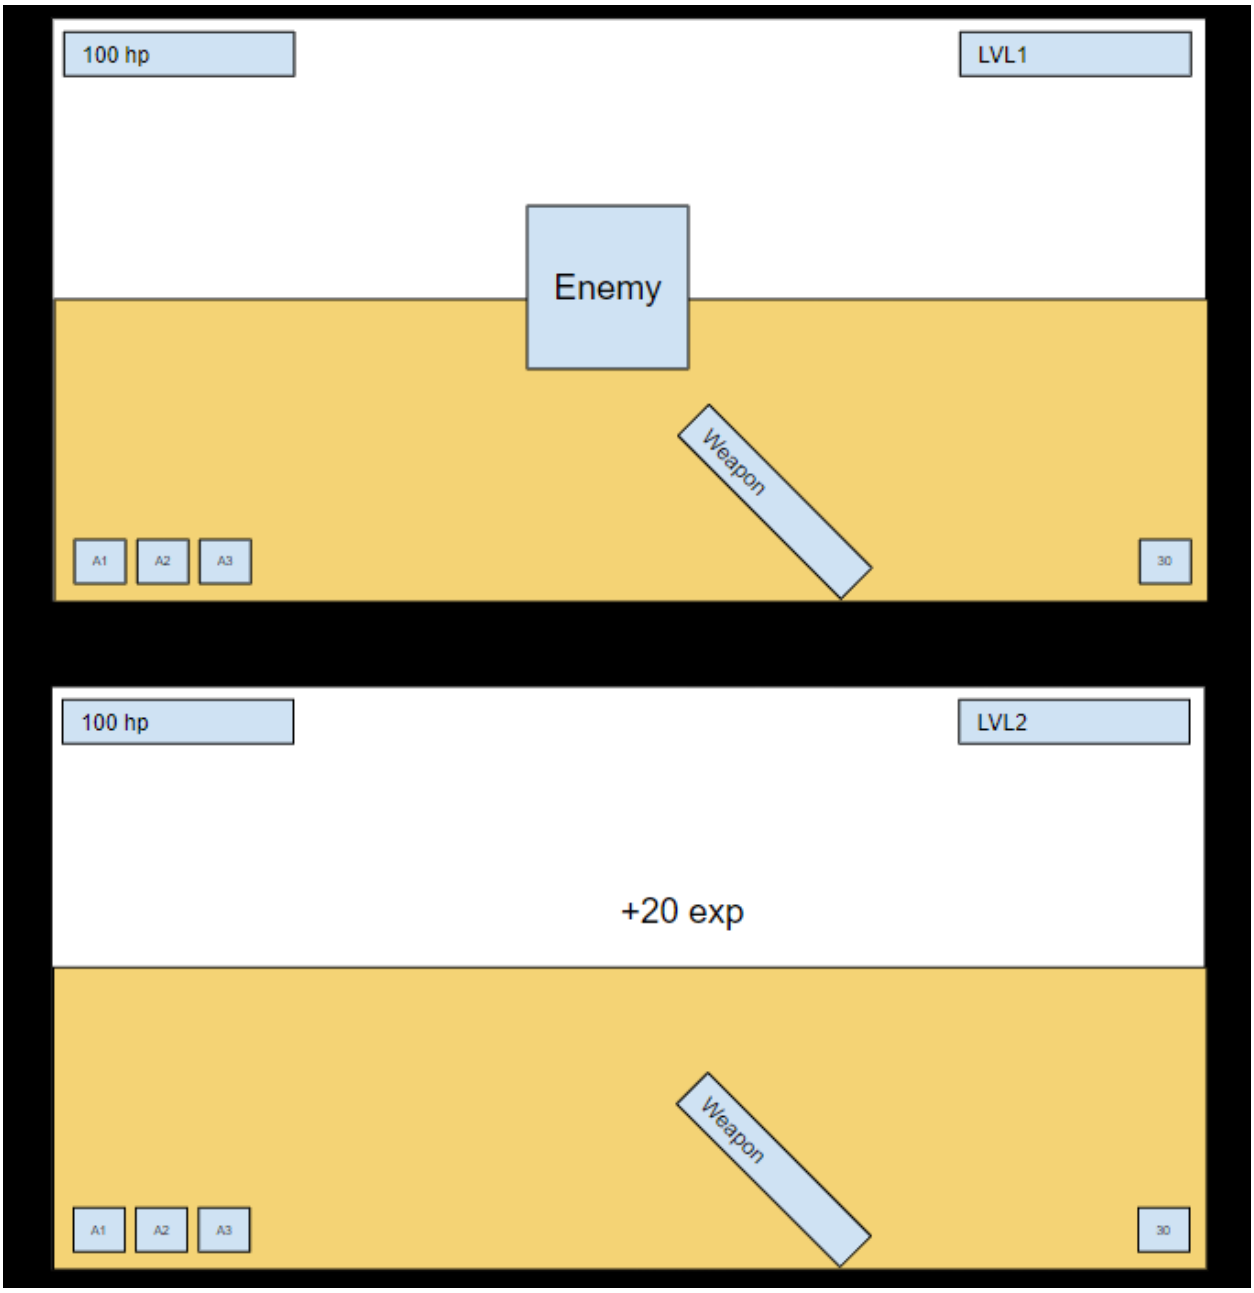

The specific area where these figures do battle is known as the battleground. this is an area where a large amount of "will" is present for which the utopianaries can seize control and make the area in their image. that is the prize for winning the game, you will have control over the area where you can make decisions and your followers will listen. This area is inspired by roman colosseums to give it an arena feel, this is due to the involvement with the will entity that has covered the area. the will's goal is to find suitable hosts so an arena was constructed to find the one most suitable. This place is a place of constant power struggle, even when achieving victory, inevitably you will be surpassed by another's will and forced out, leading you to gather your followers and attempt again numerous times for this area.

other forces in this area include enemies and camps, these enemies are native to the area created by will to test the utopianaries with trials and reward them with power. the task of securing the area, will enhance the camp's power to further test their capabilities.

Utopianaries' vision's story is that of rising to the occasion, knowing what you want, and taking it. the characters will reflect this mindset in that this mindset is the key to unlocking will. the players will experience the effects of this in the game and it will be apparent that this force of will, even though it is not seen, is present affects all of the surrounding areas, especially when enhanced by utopianaries.in their goal to control the world in their vision, they will stop at nothing to claim the power of will and use it at their own disposal to recreate the world in their image, this image may not be the most suitable for everyone but that is left up to the player to decide whether these characters are justified in their actions.

Minimum Viable Product

The MVP of this game would be in creating the main MOBA-style progression system and pairing it with the mechanics of a FPS. Stripping down many of the more complex aspects of MOBA's, and leaving the main objective of destroying enemy main structures. This can be done by focusing on the translation between FPS perspective and mechanics found in MOBA's like

enemy camps for example. Creating unique experiences in the FPS perspective would still make this a viable game in the marketplace because players will still feel a fresh style of gameplay.

Wish List (Backlog)

Online aspect - being able to get this game to an online state with servers.
Developed character abilities - background and story towards the individual abilities that the character has
Developed enemy AI Stats - Enemy followers and Enemy camps breakdown including spreadsheet
